

HL7 Drug Information and EDSS

Key issues: day 1

- x4 Guideline producers and Nzers
- agree on single API or have multiple APIs which guideline groups would provide
- option 2 is not considered a starter
- requires a common tag name or mapping across tag names
- requires a common terminology
- use ODBC model, to create a common interface
- who will maintain this

- Structured model will help knowledge developers not just knowledge consumers
- what system do we use to represent the guidelines
- will CDA approach meet guideline needs
- terminology is also critical
